

KK-W06
(Wing Gate)

Features

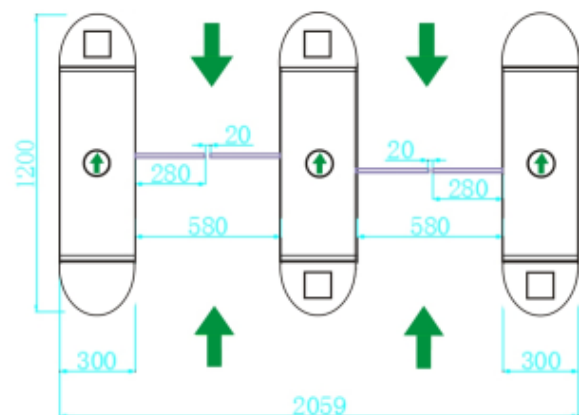

- The design is reasonable and reliable, the noise is small, the operation is stable, and the service life is long.
- The wings open very fast, effectively preventing trailing and increasing the speed of travel.
- After the power is turned off, the wings automatically open to form a transparent channel.
- Directional prompt LED light.
- pairs of infrared sensors to prevent pedestrians from entering the channel illegally
- Anti-backlash, pedestrians enter the channel from the opposite direction and immediately call the police.
- Anti-tailing, preventing non-permitted situations of too many people at one time.
- The automatic reset function
- compatible with various smart cards such as IC and ID card.
- can be extended to an automatic identification system to achieve functions such as access control, attendance, and charging.

Specifications

- Material: 304 stainless steel, material thickness: 1.5mm, cover thickness: 2mm
Internal structure: steel frame structure
- Cabinet size: 1200*300*980
- Channel width: 550MM
- Wing material: Acrylic, etc.
- Wing color: blue, red
- voltage: DC24V
- Control signal: relay signal input
- Light Tips: Green light passes, red light prohibits access light working power: DC12V±5%
- Passing speed: 30 person/min read head
installation position: 2
- Control panel installation position: 2
- Gate opening and closing time: 0.4 second environment
- Temperature: -15 degrees to 60 degrees
- Relative humidity: ≤90%, no condensation

Customized fuction:

- Normal mode: swipe the card ,Gate opens . Gate automatically closes when timeout;
- Normally open mode (busy time): (A) the Gate is normally open, swip card to pass; (B) when no card is swiped, the alarm is entered, and the brake is automatically closed until the person retreats (the person is retracted, the gate is opened).
